WA800-3 With Tier 2 Engine

KOMATSU®

WALK-AROUND

High Productivity & Low Fuel Consumption

- High performance SAA12V140E-3 engine
- Low fuel consumption
- Dual-mode active working power select system
- Large dumping clearance

Excellent Operator Environment

- Automatic transmission with Electronically Controlled Modulation Value (ECMV)
- Advanced Joystick Steering System (AJSS)
- Roomy, quiet cab with power windows
- Low vibration & noise
- Pillar-less large cab with ROPS/FOPS Level 2 canopy
- Comfortable operator's seat

Harmony with the Environment

- EPA Tier 2 emissions certified
- Low fuel consumption

Reliability

- Reliable Komatsu designed and manufactured components
- Sturdy main frame
- Adjustment-free, fully hydraulic, wet disc brakes
- Hydraulic hoses use flat face O-ring seals
- Cation electrodeposition process is used to apply primer paint
- Powder coating process is used to apply main structure paint
- Sealed DT connectors for electrical connections

Easy Maintenance

- Simple checks
- KOMTRAX Plus

• Rear access stairs

• Auto greasing system

PRODUCTIVITY AND FUEL ECONOMY FEATURES

High Performance SAA12V140E-3 Engine

Electronic Heavy Duty Common Rail fuel injection system provides optimum combustion of fuel. This system also provides fast throttle response to match the machine's powerful tractive effort and fast hydraulic response.

Net: 603 kW 808 HP

Low Emission Engine

This engine is EPA Tier 2 emission certified without sacrificing power or machine productivity.

Low Fuel Consumption

Low fuel consumption is achieved because of the low-noise, high-torque engine and the large-capacity torque converter with maximum efficiency in the low-speed range.

Durable Buckets

Komatsu buckets are manufactured using high-tensile strength steel with replaceable welded wear plates for extended bucket life. Additional strength has been added to the bucket bottom corners, side edges, and spill guard ends for increased durability.

Bucket capacities

11.0 m ³ 14.4 yd³	Standard boom
12.3 m ³ 16.1 yd ³	Standard boom
10.0 m ³ 13.1 yd ³	High-lift boom
14.0 m ³ 18.3 yd ³	Short boom

Dual-Mode Active Working System

The machine is equipped with a two mode active working system. This system provides the most efficient hydraulic

flow for your operation. The active working switch has two modes: Powerful Loading or Normal Loading.

Dual modes switch

• Powerful Loading Mode:

Hydraulic flow to the work equipment is increased and reduced as required.

Reduces hydraulic flow from the loader pump when necessary. Traction is increased, as the hydraulic pressure load for digging/shoveling is reduced. Good for heavy digging, as the speed of the lift boom is reduced.

While the lift boom is raised, all the hydraulic flow fro the loader pump goes to the work equipment.

Normal Loading Mode:

All hydraulic flow from the loader pump is transferred directly to the work equipment.

All hydraulic flow from the loader pump goes to the work equipment. Traction while digging/shoveling is not increased. The speed of the lift boom is maximum in all operations.

WHEEL LOADER

Large Dumping Clearance

The WA800-3 was designed with ample dumping clearance for dump truck matching.

High Breakout Force

Komatsu wheel loaders have high-tensile steel Z-bar loader linkages for maximum rigidity and maximum breakout force. Sealed loader linkage pins extend greasing intervals.

69000 kg **152,120 lb** Breakout force 11.0 m³ **14.4 yd³** Excavating spade nose bucket with teeth

Excellent Stability

The WA800-3 has the widest tread in its class 3,350 mm **11'0**" and a long 5,450 mm **17'11"** wheelbase, for maximum machine stability.

Static tipping load

(with 45/65-45, 46PR (L-5) tires / bucket 11.0 m^3 14.4 yd^3)

61090 kg **134,680 lb** Straight 53740 kg **118,480 lb** 40° full turn

RELIABILITY FEATURES

Components

Komatsu manufactures the engine, torque converter, transmission, hydraulic units, and electric parts. Komatsu loaders are manufactured with an integrated production system under strict quality control.

Engine Pre-lube System

Engine durability is achieved by raising the oil pressure before starting. When the key is turned, the pre-lubrication pump sends oil from the pan to the filter. When the set oil pressure is reached, then the starter motor engages to start the engine.

Adjustment-Free Braking System

Wet multi-disc service brakes and fully hydraulic braking system mean lower maintenance costs and higher reliability. Wet disc brakes are fully sealed, helping keep contaminants out, reducing wear and maintenance. Brakes are adjustment-free, meaning even lower maintenance. Reliability is designed into the braking system by the use of two independent hydraulic circuits. This provides hydraulic

backup should one of the circuits fail. Fully hydraulic brakes mean no air system to bleed, or the

condensation of water in the system that can lead to contamination, corrosion, and freezing.

High-rigidity Frames and Loader Linkage

The front and rear frames and the loader linkage have more torsional rigidity to secure resistance against increased stress. Frame and loader linkage are designed to accommodate actual working loads, and simulated computer testing proves its strength.

Flat Face-to-Face O-Ring Seals

Flat face-to-face O-ring seals are used to securely seal hydraulic hose connections and to prevent oil leakage. In addition, buffer rings are installed to the head side of the hydraulic cylinders to lower the load on the rod seals and maximize reliability.

Cation Electrodeposition Primer Paint/ Powder Coating Final Paint

Cation electrodeposition paint is applied as a primer paint and powder coating is applied as topcoat to the exterior sheet metal parts. This process results in a durable paint finish, even in the most severe environments. Some external parts are made of plastic providing long life and high impact resistance.

Sealed DT Connectors

Main harnesses and controller connectors are equipped

with sealed DT connectors providing high reliability, water resistance and dust resistance.

WHEEL LOADER

WA800-3

MAINTENANCE FEATURES

Simple Checks, Easy Maintenance

The main monitor and the maintenance monitor (EDIMOS II) are neatly arranged for a quick, clear reading of machine functions. The main monitor also has a diagnostic function.

Main monitor

Large Side Door

Right side door is easy to open and provides accessibility for maintenance.

Maintenance monitor

Rear Access Stairs

For the purpose of boarding and exiting the machine, rear access stairs with handrail are provided. The step width clearance and the step angle have been designed for easy entry and exit. A step light is provided for night boarding.

Photo may include optional equipment.

KOMTRAX Plus

KOMTRAX Plus is a management system for large mining equipment, which enables detailed monitoring of the fleet via satellite communications. Komatsu and distributors can analyze "vehicle health", other operating conditions and provide this information to the job site, using the Internet from a remote location, on a near-real time basis. As a result, customers receive timely vehicle maintenance, reduced maintenance expenses, downtime costs and avoid mechanical trouble.

Fuel Tank Cap with Mud Cover and Large Tool Box

Auto-Greasing System

The periodic lubrication points, except for the drive shaft, are greased automatically according to a preset amount and interval. Quick-change grease canisters make replacement easy and clean.

OPERATOR ENVIRONMENT

Easy Operation

Automatic Transmission with Electronically Controlled Modulation Valve (ECMV)

Automatic transmission with ECMV automatically selects the proper gear speed based on travel speed, engine speed, and other travel conditions. The ECMV system engages the clutch smoothly to prevent lags and shocks when shifting. This system provides efficient machine operation and a comfortable ride.

• Kick-down switch:

This valuable feature increases productivity. With the touch of a finger, the kick-down switch automatically downshifts from second to first when

beginning the digging cycle. It automatically upshifts from first to second when the direction control lever is placed in reverse. This results in increased rim pull for better bucket penetration and reduced cycle times for higher productivity.

- Hold switch: If auto shift is selected and the operator
- activates this switch when the lever is at the 3rd gear speed position, the transmission is fixed to the current gear speed.

Variable Transmission Cutoff System

The operator can set the transmission cutoff pressure desired for the left brake pedal using the switch located on the right-side control panel. The operator can improve the working performance by setting the cutoff pressure to match working conditions.

- High cutoff pressure for digging operations.
- Low cutoff pressure for haul truck loading.

2: T/M cutoff ON/OFF switch 3: T/M cutoff set switch

Advanced Joystick Steering System (AJSS)

AJSS is a feedback steering system which has been incorporated to allow steering and forward and reverse selection to be controlled by wrist and finger control.

With the feedback function, the machine steering angle is exactly the same angle as the lever tilt angle.

Remote Boom Positioner

The highest and lowest position of the bucket can be set

from the cab to match any truck body. Once the positioner is set, the bucket is smoothly stopped at desired position with no shock.

1: Remote boom positioner switch

WHEEL LOADER

WA800-3

Comfortable Operation

Roomy, Quiet Cab With Power Windows

The cab is large, with a comfortably spacious interior and power windows. By adopting a high-capacity air conditioner,

Komatsu ensures operator comfort, no matter the exterior conditions. Other features designed with operators in mind include a lunchbox storage space.

Lunchbox storage space

Low Vibration & Noise

The cab rests on Komatsu viscous damping mounts (rubber and silicone oil) to reduce vibration and noise. All hydraulic equipment is mounted on high-resistance rubber to further reduce vibration and noise. Noise at the operator's ear is 75dB(A).

Comfortable Operator's Seat

The operator's seat has a reclining/air suspension design with headrest to support the operator comfortably during long operation. Also, it is easy to adjust seat height with air suspension.

Pillar-less Large Cab with ROPS / FOPS Level 2 Canopy

A wide pillar-less flat glass provides excellent front visibility. The wiper arm covers

a large area to provide great visibility even on rainy days.

Rear heated glass provides clear view even in freezing or humid conditions.
